ABOUT ME

Experienced Frontend Engineer with 10+ years building high-impact web applications, specializing in React, TypeScript, Next.js/Vite, and modern design systems. I focus on performance, clarity, and leverage—shipping interfaces that make complex financial workflows faster and more efficient. I enjoy running lightweight experiments, reading the data, and iterating quickly, while mentoring engineers and improving the frontend stack (components, testing, tooling) for long-term velocity.

EXPERIENCE

SOFTWARE ENGINEER - CONTRACT
AMERICAN EXPRESS Sept 2025 - Present (Fixed-term contract through Jan 2026)

Contributed to the completion of Zelle integration within the Business Checking Account platform, wiring up payment flows and handling edge cases for sending and receiving funds between business accounts.

Implemented and refined parts of the Business Checking onboarding experience, including multi-step flows and account setup logic, reducing friction for new business customers.

Collaborated with product, design, and backend teams to clarify requirements, document complex payment and onboarding scenarios, and ensure consistent behavior across environments.

Participated in testing and defect resolution for Zelle and onboarding features to make sure new functionality was production-ready and compliant with business and regulatory expectations.

SOFTWARE ENGINEER III
JPMORGAN CHASE 2021 - Present

Build and maintain enterprise web apps with React 18, TypeScript, Next.js, and Tailwind CSS, focusing on fast load times, responsive layouts, and clear UX for internal finance and operations teams.

Design and implement reusable single-page layout frameworks encapsulating navigation, AG Grid tables, and business logic, allowing teams to ship new features without changing core layout code.

Architect state management using Redux Toolkit and RTK Query for multiple applications, and selectively use Context API/Jotai for localized UI concerns—keeping data-fetching, caching, and UI state predictable and performant.

Write unit and integration tests with Jest, helping bring the codebase to 70%+ test coverage and significantly reducing regression bugs in production, integrated into Jenkins CI/CD pipelines.

Partnered closely with product and design to translate rough business requirements into scoped frontend projects, proposing UX flows, breaking work into iterations, and shipping incremental value while tracking adoption and feedback.

Mentor junior engineers via code reviews, pair programming, and internal documentation; championed frontend best practices around TypeScript types, accessibility, performance profiling, and component API design.

FRONTEND / INTERACTIVE DEVELOPER
POST STUDIOS 2018 - 2021

Built interactive marketing microsites and rich media experiences with JavaScript, HTML5, CSS3, and animation libraries (GSAP/WebGL), ensuring smooth 60fps animations and fast load times across desktop and mobile.

Collaborated with designers to translate Figma/Adobe CC comps into pixel-accurate implementations, often iterating on motion and micro-interactions to match brand quality bars.

Created reusable UI patterns and internal templates that reduced development time for repeat campaign types.

CREATIVE DESIGNER
NEXXEN (FORMERLY TREMOR VIDEO) 2013 - 2018

Developed high-performance interactive ad units and landing experiences using JavaScript, HTML5, and CSS, optimizing bundle size and network usage to reduce ad load time by ~40%.

Worked closely with product, design, and account teams to ship campaigns under tight deadlines, debugging cross-browser issues and ensuring accessible, responsive layouts.

Helped standardize internal frontend tooling and best practices, improving reliability and consistency across a large campaign surface area.

EDUCATION

COMPUTER SCIENCE
BLOOM INSTITUTE OF TECHNOLOGY
DSA, Modern development tech stack

A.S., DIGITAL MEDIA COMMUNICATIONS
KATHARINE GIBBS
Design-focused development; top 10% of class

SKILLS & PROFICIENCIES

FRONTEND: React, TypeScript, JavaScript (ES6+), Next.js, Vite, Redux Toolkit, RTK Query, Tailwind CSS, CSS-in-JS, Storybook, AG Grid

ARCHITECTURE & DX: Design systems, component libraries, state management patterns, performance optimization, accessibility, CI/CD (Jenkins, CircleCI)

BACKEND & DATA: Node.js, REST APIs, FastAPI, SQL (Postgres, MySQL), basic AWS (S3, EC2)

TESTING & QUALITY: Jest, Cypress, unit & integration testing, visual/UI regression concepts

PRODUCT & COLLABORATION: UX prototyping (Figma), working in product pods, data-informed iteration, mentoring, documentation
